Managing Director's Message

We began our journey in 2003 and have spent decades building and improving our products, services, and client care. We have provided the African market with impeccable air-conditioning solutions, which have become synonymous with our commitment to helping our clients with their air-conditioning needs. We have faced challenging times for several years, witnessed consistent growth and crossed many milestones successfully.

We are now in an ever-changing market, and we understand that meeting our customer's requirements is essential to the success of our business. Our key strategic imperative has always been to provide air-conditioning solutions to the end users with a strong personal touch. We are always ready to take up challenges because customers trust us. We firmly believe that "trust" is one of the main reasons our clients choose us.

As a company, we do not compromise on ethics and integrity. Our past experiences in various industries, our flexibility as an organisation, our capable workforce, and our large selection of modern air-conditioning products clearly indicate to our clients that they can count on us.

On behalf of the Board of Directors, I thank our partners, dealers, sub-contractors, and world-class suppliers for working with us. I would also like to thank the staff of Flexi-Space for growing

the business to this level; our highly trained engineers, technicians and supporting team who constantly apply their specialised knowledge and skills in providing quality services to our cherished customers. Our valued customers also need special mention for their loyalty and for believing in us. We will not compromise our quest to offer you the best service before, during and after each project.

These past years have been significant because we never stopped short of putting our best leg forward. We shall not relent nor be complacent but keep our customer satisfaction index footways high as we raise the bar in the industry. I am incredibly excited about our journey ahead and believe the best of Flexi-Space is yet to come.

Kwaku Agyenim-Boateng,

Managing Director.

About Flexi-Space

Flexi-Space Limited was established in 2006 as an air conditioning company for distributing split air condition units for offices and domestic purposes to large central air condition units for multipurpose buildings with varied requirements. Flexi-Space Limited has a workforce of 116, including Engineers, Technicians, and other ancillary staff, to manage the company's operations.

In 2013, we gained the rights to be the official agent/distributor of MDV and Midea Air Conditioners from GD Midea Commercial Air-Conditioning Equipment Co. Ltd. in China. This was part of our strategy to grow our Residential and Commercial Air Conditioning offerings. Since then, we have expanded our brand portfolio and acquired Clivet air conditioners, an Italian brand, to strengthen our presence in the industry.

Flexi-Space is envisaged to achieve the highest market share through its dedicated staff, uncompromising product quality and durability, and excellent after-sale service, unparalleled in the industry's history. We have retail outlets in Kumasi and will soon open an office in Takoradi to cater to Ghana's Northern and Western sectors.

Our history in air-conditioning sales reflects our accumulated track record of delivering the best services in the industry. We have a diverse portfolio of air-conditioning products and the latest technologies and provide bespoke solutions to the needs of our clients. We have consistently improved our response time to customer needs, expanded our range of products, and strengthened after-sale and maintenance services. The excitement of building technologies drives us. Our vision is to become a leading member in the market for air-conditioning supply and installation in West Africa.

Our Values

Quality

We adhere to industry standards and regulations while providing the best product and services in the industry.

Honesty

We foster an open and just working environment. We do what is morally right.

Diligence to Work

We are performance driven and we work efficiently and effectively to yield the best outputs.

Absolute Client Satisfaction

We are customer centric. We listen to our customers and provide valuable solutions.

Mission

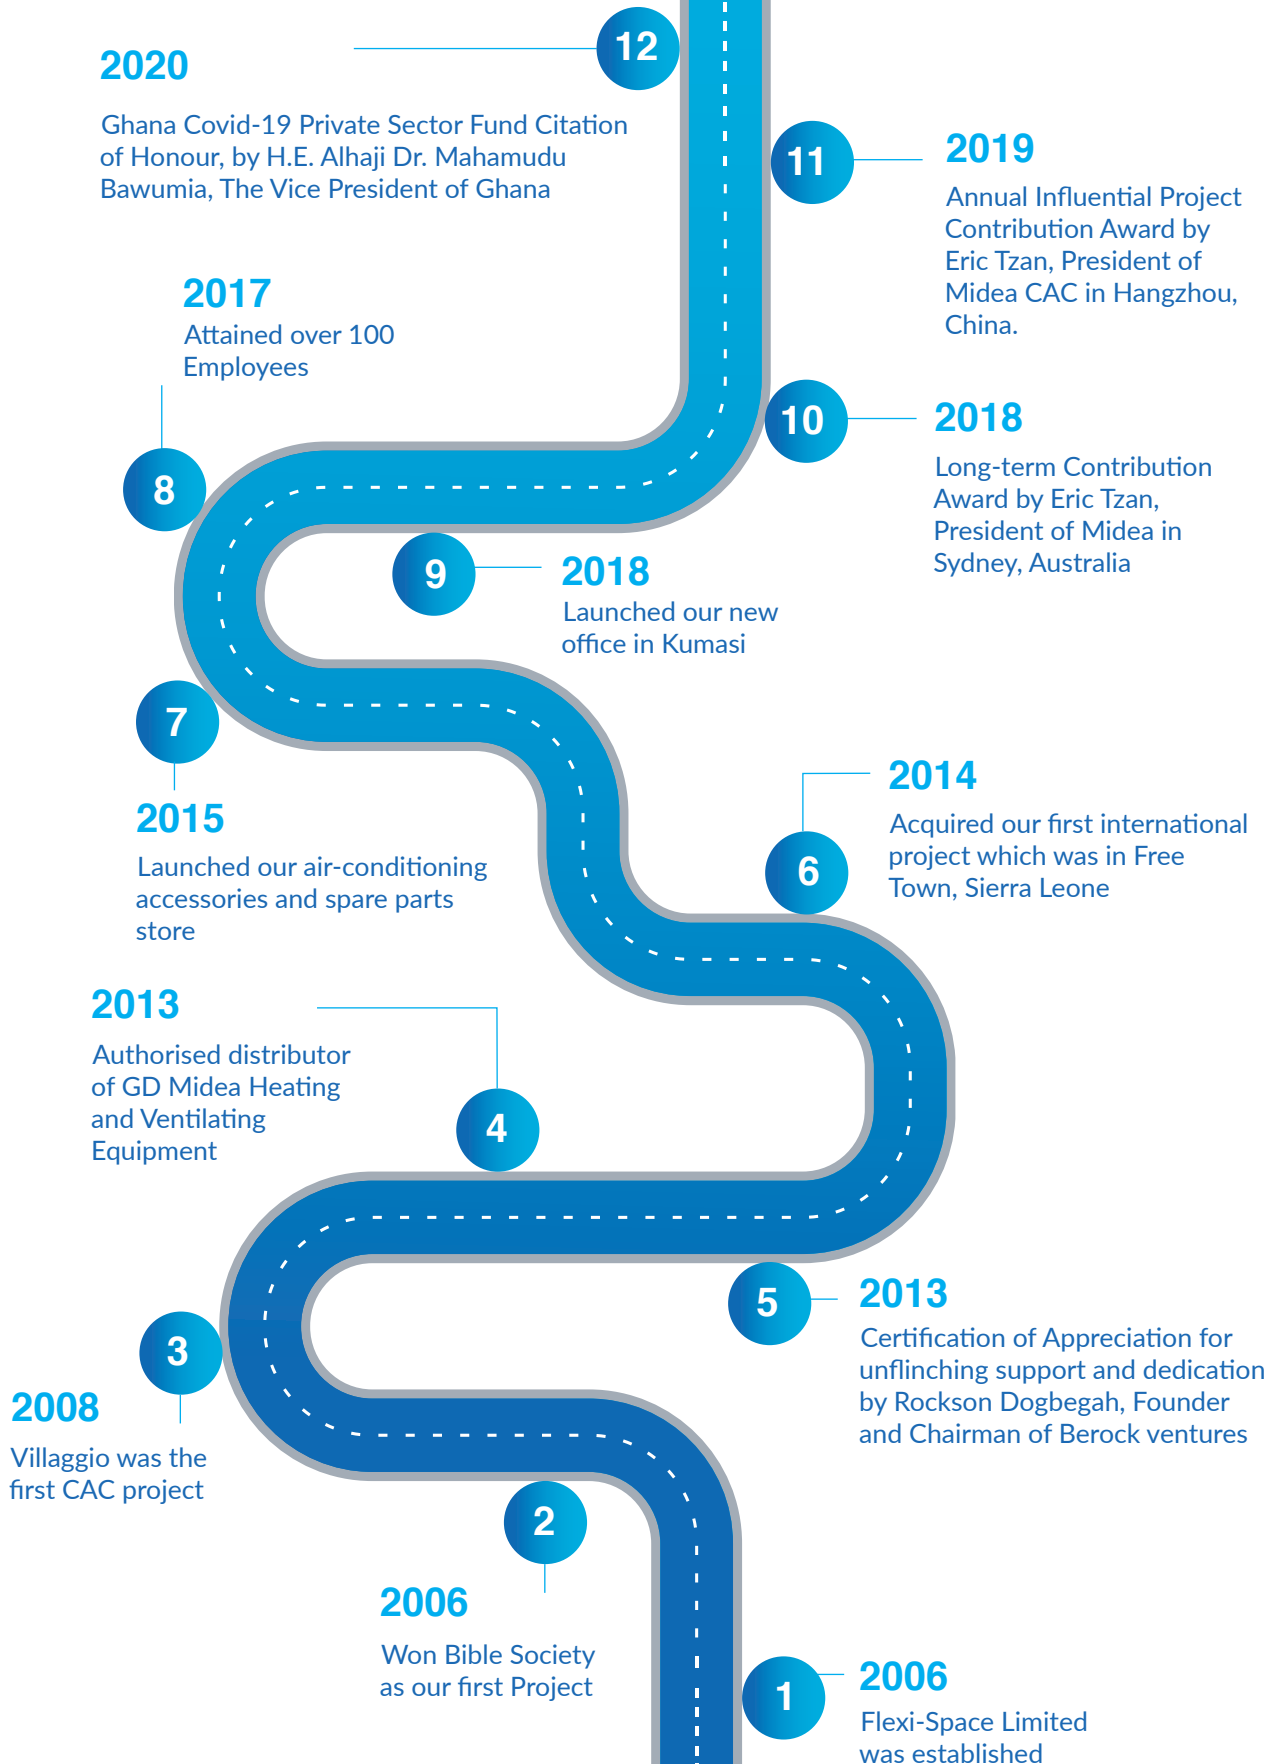

Our mission is to provide quality air conditioning services to our customers and to provide efficient and effective after sale services to delight them at competitive prices.

Vision

To become a leading member in the market for Air conditioning supply and installation in West Africa;

Milestones and Awards

Board of Directors

Kwaku Agyenim-Boateng

Managing Director

BA (Hons) Soc & Post- Graduate Dip (Lib. & Information Science)

Project Solutions

Office

Office spaces and meeting rooms usually hold large groups at a time; hence clean, cool air is significant in fostering a productive working environment. Operation cost and water consumption are some of the concerns of our clients. Therefore, an eco-friendly solution is highly recommended. Large-scale office buildings utilise Chillers and VRFs to offer an economical, low-carbon, efficient solution.

Residential

Villas, townhouses, apartments, penthouses, and other residential structures need HVAC equipment. A great solution would be a system that is low energy consumption and convenient. Our comprehensive range of residential air conditioners delivers optimum cooling. It is also environmentally friendly, and the control systems enable users to use energy efficiently. VRFs are designed and manufactured to offer an all-in-one solution with a cost-effective, comprehensive application.

Government

Government projects are usually confidential; hence some workspaces may have limited access. Such spaces may require one control system to control the air supply. A concentrated control system is the best to help avoid interruptions.

The ambient temperature and air quality play a prominent role in creating a serene environment for clients and employees. Flexi-Space offers reliable and flexible installation and maintenance solutions with the end user in mind.

Project Solutions

Auditoriums

Creating a well-ventilated area in large auditoriums is essential for every individual to have maximum comfort. It is necessary to use BMS systems to help send cool air all around the space. Such systems are cost-effective, and Flexi-Space is ever-ready to provide timely support in terms of installation and maintenance.

Hotels

Individuals prefer hotels with warm and friendly surroundings with good services. Thus, it is necessary to have an extensive capacity system for the guests to have a high-quality indoor experience. The best system to use is an integrated VRF system. It is automated to provide the right amount of air in different rooms. Visitors can adjust the indoor temperature by 0.5 degrees through the Midea VRF system.

The lobby and meeting rooms may need a large-scale cooling and ventilation system, such as Chiller and AHU, as guests frequently move in and out of these spaces. They are easy to install and maintain and are cost-effective. Flexi-Space provides onsite professional engineers and advanced diagnosis software as support.

Healthcare

Patients may have to stay over at the hospital for further medical attention. Hence, it is significant to consider the perfect temperature for the patient rooms.

Air Purification Product and Fresh Air Processor bring high-quality air needed in hospital rooms. It ensures the patient has purified air and constant temperature for safe recovery.

Project Solutions

Education

Educational institutions have diverse spaces for different activities, such as dining, teaching, leisure, and administrative work. Thus, it is paramount to provide optimal comfort for every room. Teaching theatres may require silent outdoor and indoor units to ensure a peaceful learning environment for students. Precise indoor temperature is vital for teachers and students to enjoy a well-ventilated classroom.

Sports

Large crowds frequently move in and out of the sports arena during a sporting event. Extensive air control is required to ensure a calm environment. Our VRFs and Chiller Units can provide a large cooling capacity for the main venue, which can be adjusted as needed.

The dressing rooms, VIP Lounges and Skyboxes, should also be considered when creating the best sporting experience for the athletes and guests. It is possible to provide a cool temperature using a VRF system solution for players' comfort.

Industry

Industries require chillers to cool down the production material and equipment. The large equipment needs frequent technical assistance to sustain production operations. The Flexi-Space engineering team provides on-site examination during installation and after-sale service.

A close-up photograph of a hand placing a white puzzle piece into a larger assembly of white puzzle pieces. The hand is positioned on the left side of the frame, with the thumb and index finger visible. The puzzle pieces are arranged in a grid pattern, and the hand is carefully fitting a piece into a gap. The background is a soft, out-of-focus white, emphasizing the puzzle pieces and the hand's action.
